

## WITS Changes – March 2013 (Mental Health)

04/19/2013

In the March 2013 release, 12 bugs were repaired in WITS. Below are a summary of the errors and the resolutions of the problems.

1. Encounter: Release to billing yellow page error **Resolution:** A "...infinite loop..." yellow screen was occurring when unsaved changes were detected for encounters where automatic release to billing is applicable. Since the user never sees the Release to Billing screen due to the automated process (and therefore of course cannot actually click Save), this has been resolved such that unsaved changes will no longer need to pass the on-screen check in this scenario.
2. Assessments (IDMH) - Substance Use: The Detailed Drug Code dropdown is not filtering by Substance **Resolution:** The detailed drug code on the substance use screen now filters by the substance selected.
3. Treatment: The Dispensary Ordering Quantity field is allowing negative values **Resolution:** When attempting to save a negative quantity on the Dispensary Ordering screen, you will receive the following message: "Quantity must be greater than zero."
4. Dispensary: Required fields error appears when the Source information dropdown is selected **Resolution:** A "required fields missing" error was occurring when the user selected a source, but had not saved the selection. Toggling between the items in the inventory bucket without clicking save, no longer triggers the "required fields are missing" error message.
5. Encounter: Error message does not reference that military time is a correct format **Resolution:** Error message on the encounter screen has been updated to include that the military time format is acceptable in the start time and end time fields.
6. Encounter: Release to Billing Allowed for Unsaved Encounter **Resolution:** A yellow screen was occurring upon Release to Billing due to the Modality Approved Services business rule fix (implemented in the January 2013 release), enabling unsaved Encounters to be released. The "You must save or cancel your changes first." error message will now occur when trying to release to billing w/o having saved the encounter.
7. Drug Testing: Missing Finish Button on Drug Test Results Screens **Resolution:** A Finish button, which when clicked brings the user back to the Client Activity List, has been added to the Drug Test Results List screen.
8. E Court: Remove the Generate Report link on Community Service screen **Resolution:** The "Generate Report" link on the E Court - Community Service screen has been removed.
9. Referral: The refer to program can be changed after the referral is accepted **Resolution:** When reviewing a placed/accepted referral in the activity list of the Referred By agency the Referred To Program field is now read-only.

10. Admission: Several Fields on the Financial/Household Screen not Wide Enough to Accommodate Lookup Values **Resolution:** The School Attendance, Employment Status, Expected Payment Source, and Insurance Type fields on the Financial/Household screen were widened to accommodate lookup values having a large number of characters.
11. Menu: The Drug Testing 'Results' Sub-menu Item is not Appearing **Resolution:** "Results" is now enabled as a sub-menu item under "Drug Testing".
12. Vital Signs: Entering a height less than 5' produces an error **Resolution:** The warning message "The Height Measure (Feet) should be greater than 4 and less than 10." no longer appears when height ft = 4 and inches is set to anything other than "0". Additionally, the warning message no longer prevents saving.

Below you will find a summary of the changes to WITS for the March 2013 release (which took place April 19, 2013). When these changes are made in Idaho-Mountain and Idaho-Pacific, the top right portion of your screen will say March 2013.

### Consent/Referrals

1. The Encounter Summary is now a condensable activity. The Encounter Summary can be consented only if the Disclosed to Agency on the Consent has the same Tax ID as the Disclosed from Agency. The consented Encounter Summary Report will include the Encounters with the service start date covered in the Consent timeframe. Also, the notes of these Encounters will appear even if the notes indicator is set to "no".
2. Filtered inactive agencies out of the available selections in the "Disclosed to Agency" field on the Consent screen and the "Refer to Agency" field on the Referral screen. An "inactive" agency is an agency where the Start Date is <= today's date or the Inactive Date is >= today's date.

### Drug Test

Drug Test Results: Updated the existing PDF Report to match the new format of Drug Test Results section in the Client Progress Report and replaced the "Agency" column with "Specimen #".

### Scheduler

Relabeled the "Service" dropdown field on the Scheduler Edit window to read "Procedure" as the dropdown field was in fact displaying procedures and not services. Additionally, when an encounter is created directly from the scheduler, the "Service" dropdown on the Encounter Profile screen now displays all services, however the services associated with the selected procedure from the scheduler now display at the top of the list.

Scheduler Edit
